

- Import fuel transactions
- Manage lease contracts
- ATO audit compliant
- Built to Australia & New Zealand standards
- Track driver allocations for internal cost recovery
- Green Reporting

A MAXIMO EXTENSION FRAMEWORK

# Fleet Asset Management

Clarita Solutions Fleet Management Framework is an extension for IBM Maximo © Asset Management that enables your organisation to manage fleet assets in a single software environment.

## Managing Transport Assets

Like many assets, vehicles represent a capital investment that needs to be maintained and depreciates over time. Unlike most business assets however, vehicles bring an added layer of complexity to the asset management process – tracking business versus private use for Fringe Benefit Tax; leasing; salary packaging; and traffic, parking & registration compliance for example.

## Single Point of Truth

Fleet Asset Management framework brings oversight of fleet and non-fleet assets together into a single system. With vehicle purchase, registration, fuel consumption, bookings and maintenance all documented in the one system, Maximo becomes the SPOT (Single Point of Truth) for your organisations' entire fleet.

## Built locally

Australian and New Zealand Fringe Benefit Tax, lease and accounting standards and regional fuel supplier data formats are accommodated in the framework without costly customisation.

## Streamlined Processes

Automated import of odometer readings and fuel consumption data transforms processes that would otherwise rely on manual data entry, leading to faster and more accurate information and asset management insight.

Fleet Start Centre -Key Performance Indicator Fuel and Classification

Streamline historical data in one application for a single point of truth and quick data access at a glance.

## Fleet Management Framework for IBM Maximo

The Fleet Management Framework is a single point of truth for fleet and non-fleet assets. Using the framework as an extension for IBM Maximo organisations can:

- Manage regulatory requirements against fleet assets including FBT, registration, Police permits and Safety Certificate Inspections;
- Import Lease data directly from multiple lease providers in multiple file formats;
- Capture Toll and Fuel Card details such as card number, asset, general ledger account, expiry date and supplier;
- Link transaction details by vehicle registration, asset number or fuel cards;
- Generate maintenance schedule servicing of your fleet assets;
- Import fuel data directly from multiple fuel providers. The framework supports the various file formats used by fuel providers in Australia and New Zealand.

Organisations running a fleet of corporate vehicles will find Clarita Solutions' Fleet Management Framework a comprehensive, end-to-end solution for fleet asset management without the complexity of solutions developed specifically for the transport industry where fleets include aircraft, rail freight or urban transport networks.

FUNCTION	FEATURES	BENEFITS
Fleet Asset Management	<p>Process all fleet management transactions in a single environment and in accordance with regulatory requirements for fleet assets.</p> <p>Generate accounts payable or journal transactions (Financial Interface File creation).</p>	<p>Leverage Maximo as the single point of truth for all fleet assets.</p> <p>Meet Australian Taxation Office audit requirements in relation to Fringe Benefits Tax obligations.</p>
Fuel Consumption	<p>Automatically import fuel and odometer reading data directly from multiple fuel providers. The framework supports the various file formats used by fuel providers in Australia and New Zealand.</p>	<p>Erroneous or fraudulent transactions can be detected and investigated.</p> <p>Improve data accuracy and eliminate double-handling.</p> <p>Leverage data for analysis to schedule preventative maintenance, forecast utilisation and understand asset life-cycle replacement.</p>
Lease Management	<p>Capture lease contract details including: (but not limited to) vehicle registration, contract kilometers, contract term, contract expiry and lease amount.</p>	<p>Enable lease contract data to be verified against lease company correspondence and ensure contract requirements are managed</p> <p>Leverage data for analysis and better planning</p>
Reports, Alerts and Utilisation	<p>Track vehicle bookings and driver allocation for internal cost recovery.</p> <p>Link Infringement Notices to the driver allocated to the vehicle at the time the infringement was issued.</p> <p>Management start centres and reports included</p>	<p>Maximise vehicle utilisation.</p>

### About Clarita Solutions

For asset intensive organisations, Clarita Solutions brings technical and process maturity to the task of identifying and implementing best asset management practice at the strategic and operational level. As a strategic business partner, we offer a unique blend of insight, skills and expertise in asset management, geographic information systems and mobile technologies to deliver comprehensive solutions that optimise asset performance and associated business processes.

From our Brisbane base, we deliver best-of-breed asset management solutions for clients in utilities, government, transportation, oil and gas industries. Dedicated to delivering quality results for clients, our professional services span project management, software engineering, implementation and support, drawing on industry trends and emerging technologies.
